Proposed Classification Provisions

See Appendix B herein.

Analysis

Introduction

Numerous items in the Foodstuffs Group name particular types of foodstuffs, and these provisions can be difficult to interpret, apply or verify. The transportation characteristics below relate to the items subject to the Foodstuffs Group, as shown in the Present Classification Provisions herein.

Transportation Characteristics

Density—The information of record includes 178,112 density observations obtained from the FCDC's Density Study¹. The densities range from 0.83 to 68.62 pcf, with an overall average density of 21.99 pcf. As shown in the graph on the following page, the density distribution is left-skewed, with over 73% of the figures being 15 pcf or greater.

_

¹ The Density Study is part of an ongoing effort by the FCDC to collect information on actual shipments across all product categories handled by the LTL industry. Carriers that choose to participate in the Study periodically submit shipment data captured through their respective freight auditing programs. The FCDC uses verifiable data points, identified by NMFC item, that include the weight and the dimensions and/or cube of the shipping unit.

SUBJECT 1

Handling, Stowability and Liability—Care must be taken to avoid stowing the involved commodities with hazardous materials or other freight that may pose a contamination risk. They may also be damaged by freight with which stowed or by the elements. However, there have been no reports of unusual or significant handling, stowability or liability issues.

Conclusion

Based on the foregoing analysis, this proposal would cancel numerous provisions with reference to the full-scale, density-based provisions of item 73260². Other provisions would be canceled with reference to items 73150³, 74095, 77060 and 85880, or a combination thereof, including some with reference to item 73260⁴, in the interest of clarification and simplification.

Numerous Notes would be canceled as having no further application. Notes, items 73262 and 73263 would be amended for clarification. Two new Notes, one attendant to item 73260 and the other attendant to item 74095, would be established to clarify the application of the two items.

The minimum packaging requirements would ensure that freight is adequately protected and can be handled and stowed in a manner that is reasonably safe and practicable so as to withstand the normal rigors of the less-than-truckload environment.

Subject 1, Page 2 of 2

² Item 73260 provides the FCDC's standard 11-subprovision density scale, which includes reference to Item (Rule) 170, the inadvertence clause.

³ The density provisions include reference to Item (Rule) 170, the inadvertence clause.

⁴ When shipped, the appropriate classification for the commodities would be dependent upon the product's representation and intended use.

1. Applies on materials regulated by the U.S. Department of Transportation as a Hazard Class 2, Division 2.2, Nonflammable Gas, as defined in 49 CFR §173.115 and required to bear a notice to that effect on bills of lading and packaging. 2. Does not apply when U.S. Department of Transportation regulations require shipping containers to bear a 2.1 'FLAMMABLE GAS' or 2.3 'INHALATION HAZARD' label. NOTE—Neon, inert may be shipped in aluminum cylinders. NOTE—Liquefied helium may be shipped in doublewall vacuum insulated containers without additional packaging, subject to the following: 1. When container exceeds 30 liters in capacity but does not exceed 100 liters capacity. 2. When container exceeds 100 liters capacity, container must be equipped with a base which will prevent rolling if container is laid on its side. When base is equipped with wheels, container must rest on two wheels and on immovable legs, skids or pad during transit. 3. When not constructed as described in paragraph (2), above, container body must be protected with a sleeve of solid fiberboard 1/4 inch or thicker or with material of equal or greater strength. Fiberboard may be laminated to form closely fitted vertical segments held together with a layer of fiberboard to facilitate forming around container body.	00000
