

SUBJECT 2 — DOCKET 2023-3 — APPROVED AS DOCKETED

ITEM 280

DEFINITION OF OR SPECIFICATIONS FOR INTERMEDIATE BULK CONTAINERS (IBCs)

General Definition and Specifications

Sec. 1. Intermediate Bulk Containers (IBCs) are large flexible, semi-rigid or rigid portable packages that permit handling with mechanical equipment and may be constructed from a variety of materials including fabric, fiberboard, metal, plastic or wood, or a combination thereof, see Secs. 2 and 3 herein. The receptacle of an IBC has a volumetric capacity of not more than 3,000 liters (793 gallons or 106 cubic feet) and not less than 450 liters (119 gallons or 15.9 cubic feet) or a maximum net mass of not less than 400 kilograms (882 pounds). They must be designed with handles, straps, legs, an integral lift truck skid, pallet or platform base, or be secured on a lift truck skid, pallet or platform so as to provide for mechanical equipment to safely pick up the container, and must be constructed so as to sufficiently contain and protect the contents and withstand the normal rigors of the less-than-truckload environment. IBCs intended for stacking must have an integral stacking alignment or securing design feature. IBCs must be securely closed, and sufficient outage must be left within the IBC to ensure that the package will not leak or be permanently distorted as a result of liquid expansion due to change in temperatures likely to be encountered during transportation. IBCs designed for the transport of solid materials must be sift-proof and water-resistant. Bottom valves must be secured in the closed position, have a secondary means of sealing and must sufficiently protect against damage (e.g. shearing).

Flexible IBCs (FIBCs)

Sec. 2. Flexible IBCs (FIBCs) may be used for dry commodities only and must be constructed as follows and meet the performance requirements specified herein. FIBCs must be made from coated or uncoated polyethylene or polypropylene woven fabric so constructed as to contain and protect the contents and withstand the normal rigors of the less-than-truckload environment. Handles or straps must harness, encircle or be securely attached to the FIBC body to facilitate handling by mechanical equipment. FIBCs with spouts for discharging purposes, or with top or bottom filling or discharging openings, must be secured by means that will provide a sift-proof closure. FIBCs on lift truck skids, pallets or platforms must have the FIBC body placed within a fiberboard tray, with or without a separate fiberboard sleeve, and the depth of the tray or tray and sleeve, as the case may be, must extend at least 20 inches from the lift truck skid, pallet or platform deck. FIBC body, tray and, where present, sleeve must not overhang the deck, and the entire handling unit must be secured together with plastic film. FIBCs may be used again in transportation only when they are in such condition that they will protect contents as effectively as new containers.

► Nonhazardous Liquids in Fiberboard IBCs with Inner Plastic Film Bag or Liner

Sec. 3. Nonhazardous liquids may be shipped in fiberboard IBCs having an inner plastic film bag or liner, secured on a lift truck skid, pallet or platform, meeting the following minimum specifications:

Base: IBCs must be secured to a lift truck skid, pallet or platform base of sufficient design, size and strength to ensure weight of IBC does not cause any failure of structural components. See Item 265.

Fiberboard Container must be six-sided or octagonally shaped with a top cap and bottom tray made of triplewall corrugated fiberboard. Container must be of sufficient size and strength to support and contain the capacity and weight of the inner plastic film bag or liner and its contents during transportation.

Inner Plastic Film Bag or Liner must have appropriate mil thickness or number of plies, in addition to having sufficient outage, to fully contain contents and prevent any leakage or seepage during transport.

Securement and Unitization: Fiberboard container must not overhang the lift truck skid, pallet or platform deck and must be secured to the lift truck skid, pallet or platform by strapping in opposing directions, with at least two straps in each direction.

Markings: Container must be placarded with precautionary warning labels on two outside opposite vertical panels in a prominent manner by either printing or by application of a pressure-sensitive label, differing in color from any other container printing. Label must be of horizontal rectangular 4 x 7 inch dimensions containing a bold border within which are printed the words 'LIQUID' in bold letters of 1½ inches in height with 'CONTENTS' printed below in letters of ½ inch in height.

Gross weight of container and contents not to exceed 4,000 pounds.

Use for Hazardous Materials

Sec. 4. IBCs used for the transportation of hazardous materials must be in conformance with the applicable requirements of Title 49 of the Code of Federal Regulations (CFR). ASTM D7387, Standard Test Method for Vibration Testing of Intermediate Bulk Containers (IBCs) Used for Shipping Liquid Hazardous Materials (Dangerous Goods), may be used to test the integrity of the IBC, providing the 49 CFR requirements have been met.
