October 10, 2025

NOTICE OF DISPOSITION – DOCKET 2025-2

This notice reflects proposed amendments discussed by the Freight Classification Development Council (FCDC) at the public meeting on September 29, 2025, and the action of the FCDC on each proposal.

Amendments resulting from the dispositions herein will be published in a supplement to the National Motor Freight Classification® (NMFC®) that is scheduled to be issued on November 6, 2025, with an effective date of December 6, 2025. ClassIT+® will be automatically updated on December 6, 2025.

Information on the FCDC and its procedures for amending the NMFC and ClassIT+ may be obtained online at **www.nmfta.org**. Click on "NMFC National Motor Freight Classification." If you need assistance, please contact fcdc@nmfta.org.

Please reference the docket and subject numbers on all correspondence.

FREIGHT CLASSIFICATION DEVELOPMENT COUNCIL

SUBJECT 1 — DOCKET 2025-2 — APPROVED AS DOCKETED

Item	Description	Class
VEHICLE PARTS: subject to item 190500		
⇒191730	👉 Frames (Gear Frames); or Partial Chassis; NOI, in packages, see Note, item 191731:	
Sub 1	Greatest dimension exceeding 96 inches, subject to Item 170 and having a density in pounds per cubic foot of:	
Sub 2	Less than 5	300
Sub 3	5 but less than 10.5.....	175
Sub 4	10.5 or greater	92.5
Sub 5	Greatest dimension not exceeding 96 inches, subject to Item 170 and having a density in pounds per cubic foot of:	
Sub 6	Less than 5	250
Sub 7	5 but less than 10.5.....	150
Sub 8	10.5 or greater	85
⇒191731 (NEW)	NOTE—Articles tendered for shipment on lift truck skids, pallets or platforms must be securely fastened to and must not overhang the edges of the lift truck skid, pallet or platform deck. Exposed surfaces and edges must be protected by packing forms or other packaging materials so as to withstand the normal rigors of the less-than-truckload environment.	

Comment: Item 191730 is amended to provide classes predicated on greatest dimension and density, with breaks at 5 and 10.5 pcf, and to update the minimum packaging requirements. Concurrently, Note, item 191731 is established to provide additional packaging requirements.

SUBJECT 2 — DOCKET 2025-2 — APPROVED AS MODIFIED

It is proposed to amend Item (Rule) 110, Definitions and Explanations of Terms, Punctuation and References, to read as follows:

ITEM 110

DEFINITIONS AND EXPLANATIONS OF TERMS, PUNCTUATION AND REFERENCES

The following definitions will apply when such terms are used in this Classification or in tariffs governed by this Classification. When different definitions are provided for the same terms in connection with rates, classes, rules or other provisions, such definitions will take precedence.

Secs. 1-19. No Change.

⇒**Sec. 20.** The term '**Not accepted**' means that the described article or articles will not be accepted for shipment nor as premiums accompanying other articles.

Secs. 21-24. No Change.

SUBJECT 2 — DOCKET 2025-2 — APPROVED AS MODIFIED — Concluded

It is proposed to amend the items listed below to provide class 0:

16350	49825	69970	133720	144900	155015
45450	⇒52692	107820	135760	146315	

Note, item 52692 is amended as follows:

52692 NOTE—⇒Does not apply on platinum sludge, which is contact mass residue from which magnesium sulfate and other material has been dissolved and eliminated. For applicable provisions, see item 52693.

Item 52693 is established:

Item	Description	Class
⇒52693 (New)	Platinum Sludge , in drums.....	0

Comment: Item (Rule) 110 is amended to remove the explanation of the term “Not Taken.” As modified, ten items marked in the NMFC as “Not Taken” are amended to provide class 0. Note, item 52692 is amended to read “Does not apply on platinum sludge, which is contact mass residue from which magnesium sulfate and other material has been dissolved and eliminated. For applicable provisions, see item 52693.” Concurrently, item 52693 is established applying on “platinum sludge” and provides class 0.

Comment: Various items applying on non-portable air handling equipment are canceled with reference to new item 114115, naming "Air Conditioners, Air Coolers, Air Heaters, Air Handling Equipment, or Parts thereof, other than portable," with a "viz." format, and classes predicated on packaging and density, with breaks at 6, 10, and 15 pcf. Additionally, the "viz." in item 61700 is amended by removing two listings and adding, "Air Conditioners, Heaters, Dehumidifiers, Humidifiers, Cleaners, Purifiers or Vaporizers, portable, NOI." Moreover, the listing for "Humidifiers, whole house, automatic," would be removed from item 25525. Notes, items 57158 and 114128 are canceled with reference to new Notes, items 114116 and 114117. New Note, item 114118 is established to provide additional packaging requirements for air handling equipment tendered in packages other than boxes or crates. Furthermore, Notes, items 114129, 122867, 122868, and 123272 are canceled with no further application, as are Packages 2475 and 2476.

SUBJECT 16 — DOCKET 2025-2 — WITHDRAWN

THIS SUBJECT PROPOSED THE FOLLOWING AMENDMENTS THAT WERE NOT ADOPTED

It is proposed to amend Item (Rule) 995, Weights-Gross Weights and Dunnage, to read as follows:

ITEM 995**WEIGHTS-GROSS WEIGHTS AND DUNNAGE**

Sec. 1. Unless otherwise provided, density shall be computed on actual gross weights, except when estimated weights are authorized such estimated weights shall be used. A shipping carrier, container or package, or pallet, platform or skid constitutes part of the gross weight.

[Remainder of Rule—No Change.]

Comment: The FCDC voted to withdraw this proposal. The current provisions will continue to apply.

SUBJECT 17 — DOCKET 2025-2 — APPROVED AS DOCKETED

It is proposed to amend Item 245, Definition of or Specifications for Crates, to read as follows:

ITEM 245

DEFINITION OF OR SPECIFICATIONS FOR CRATES

Crates are six-sided containers constructed of wood or metal slats or structural members with apertures between, securely nailed, bolted, screwed, riveted or welded together, of sufficient design and strength to fully enclose and protect contents so as to withstand the normal rigors of the less-than-truckload environment. Article(s) must be secured within crates and no part shall protrude. ⇒ Crates must be framed to provide sufficient strength and stability to support toploaded freight of even load and weight distribution during transport, utilizing the available space above the crate, up to 96 inches, and having a density of at least 20 pounds per cubic foot.

Standard wood crates must meet the following minimum specifications:

Base: Crates must have a lift truck skid, pallet or platform of sufficient design, size and strength to ensure article(s) cannot cause any failure of structural components. Deck boards must be sufficiently close to one another, or a wood structural panel (see Note 1) may be secured on top of deck boards to adequately protect article(s) from underside damage and to prevent article(s) from falling through the deck.

Note 1—Wood structural panels (plywood or oriented strand board) shall conform to DOC PS1, DOC PS2, ANSI/APA PRP 210, CSA O325 or CSA O437*.

Sides, Ends and Tops: Crates must be constructed with an outer framework consisting of upright and horizontal members and with additional diagonal, upright and horizontal members where necessary to provide proper strength and rigidity.

⇒ Crate sides, ends and tops must be constructed with slats or members sufficiently close to one another to adequately protect article(s) on the sides, ends, top and bottoms, but openings on the sides, ends and tops must not exceed 25 inches in their greatest dimension, which may be the length, width, height or diagonal measurement of the opening. See Note 2. Horizontal structural members must be placed no more than 24 inches apart.

Where present, wood structural panel(s) must be secured to frame with fasteners appropriate to prevent failure during transport.

Note 2—Lumber must be seasoned, reasonably sound, and free from cross grain and knots which would interfere with nails, bolts or screws, or knots which are greater than $\frac{1}{3}$ the width of the lumber.

Fasteners: Framework, corners and joints must be secured with nails, bolts or screws to ensure the fastened connections are stronger than the materials being joined.

Interior Requirements: Article(s) must be secured to prevent movement during transport. Protective packing forms or other packaging materials must be used where necessary to afford adequate protection against damage to the article(s). Article(s) with legs must be suspended away from all edges of the crate by at least one inch.

SUBJECT 17 — DOCKET 2025-2 — APPROVED AS DOCKETED — Concluded

Three-Way Locking Corners: Crates must be constructed with three-way locking corners, where members will be joined with nails, bolts or screws driven into side grain of joining members. Examples are shown below:

***References:** U.S. Department of Commerce (DOC); American National Standards Institute (ANSI); APA - The Engineered Wood Association (APA); CSA Group (CSA).

Metal crates must meet the following minimum specifications:

Base: Crates must have a metal lift truck skid, pallet or platform of sufficient design, size and strength to ensure article(s) cannot cause any failure of structural components. Deck slats must be sufficiently close to one another to prevent article(s) from falling through the deck. Article(s) must be adequately secured to a metal lift truck skid, pallet or platform that will adequately protect contents from underside damage.

Sides, Ends and Tops: Crates must be constructed with an outer framework consisting of upright and horizontal members and with additional diagonal, upright and horizontal members where necessary to provide proper strength and rigidity.

⇒ Crate sides, ends and tops must be constructed with slats or members sufficiently close to one another to adequately protect article(s) on the sides, ends, tops and bottoms, but openings on sides, ends and tops must not exceed 25 inches in their greatest dimension, which may be the length, width, height or diagonal measurement of the opening. Horizontal structural members must be placed no more than 24 inches apart.

Interior Requirements: Article(s) must be secured to prevent movement during transport. Protective packaging forms or other packaging materials must be used where necessary to afford adequate protection against damage to the article(s). Article(s) with legs must be suspended away from all edges of the crate by at least one inch.

[REMAINDER OF ITEM—NO CHANGE.]

Comment: The introductory paragraph of Item (Rule) 245 is amended to include, "Crates must be framed to provide sufficient strength and stability to support toploaded freight of even load and weight distribution during transport, utilizing the available space above the crate, up to 96 inches, and having a density of at least 20 pounds per cubic foot," so that this requirement applies to the three forms of authorized crates. Concurrently, the wooden and metal crates subsections are amended accordingly.
