NOTICE OF DISPOSITION – DOCKET 2026-2

This notice reflects proposed amendments discussed by the Freight Classification Development Center (FCDC) at the public meeting on September 29, 2026, and the action of the FCDC on each proposal.

Amendments resulting from the dispositions herein will be published in a supplement to the National Motor Freight Classification® (NMFC)® that is scheduled to be issued on November 12, 2026, with an effective date of December 12, 2026. ClassIT+® will be automatically updated on December 12, 2026.

Information on the FCDC and its procedures for amending the NMFC and ClassIT+ may be obtained online at **www.nmfta.org**. Click on "NMFC National Motor Freight Classification." If you need assistance, please contact fcdc@nmfta.org.

Please reference the docket and subject numbers on all correspondence.

FREIGHT CLASSIFICATION DEVELOPMENT CENTER

SUBJECT 1 — DOCKET 2026-2 — DISAPPROVED

THIS SUBJECT PROPOSED THE FOLLOWING AMENDMENTS THAT WERE NOT ADOPTED

It is proposed to amend Item 110, Definitions and Explanations of Terms, Punctuations and References, to read as follows:

Item 110**DEFINITIONS AND EXPLANATIONS OF TERMS, PUNCTUATION AND REFERENCES**

Secs. 1-8. (c) No Change.

Sec. 8. (d) Unless otherwise provided, where a shipment consists of multiple handling units, the density shall be calculated on each handling unit, except that where shipping papers show only a total weight for all handling units tendered, the density shall be calculated on each handling unit provided the weight and dimensions of each handling unit are identifiable by the carrier.

Secs. 9-24. No Change.

It is proposed to amend Item 640, Mixed Shipments and Articles Classified by Weight or Quantity, to read as follows:

Item 640**MIXED SHIPMENTS AND ARTICLES CLASSIFIED BY WEIGHT OR QUANTITY**

Sec. 1. When a single shipment is subject to one class, it will be assessed using the actual or authorized estimated weight and at the applicable class.

Sec. 2. When a single shipment contains articles subject to two or more classes, the bill of lading must specify each article separately. Except as outlined in Sec. 3, each handling unit shall be classified in accordance with the 13-subprovision density scale published within this Classification. When the shipper has provided weight and dimensions for each handling unit on the original bill of lading, those weights and dimensions will be used to calculate density, pending carrier verification. In the absence of accurate information on the original bill of lading, at carrier's discretion, density may be calculated based on the total weight and overall cube of the entire shipment or on the weight and dimensions of each individual package or handling unit. In such instances all parties must be notified of the use of this Rule and section.

Sec 3. In the case that a unitized handling unit contains an article bearing the HS&L symbol (👉), Bomburst symbol (💣), or has classes based on packaging, greatest dimension, or some other factor besides density, the handling unit will be assessed at the class provided for the highest classed article in or on the unitized handling unit. In such instances, all parties must be notified of the use of this Rule and section.

SUBJECT 1 — DOCKET 2026-2 — DISAPPROVED — Concluded

THIS SUBJECT PROPOSED THE FOLLOWING AMENDMENTS THAT WERE NOT ADOPTED

It is proposed to amend Item 680, Packing or Packaging—General, to read as follows:

Item 680

PACKING OR PACKAGING—GENERAL

Secs. 1-17. No Change.

⇒**Sec. 18.** When unitization to pallets, platforms, skids or racks is by container of box-type fiberboard construction, packing devices must be used in any unoccupied space between inner packages and inside top of outer container. Packing devices used must be of sufficient strength and design to prevent collapse of the outer container when top loaded with other freight.

Comment: The FCDC voted to disapprove this proposal. The current provisions will continue to apply.

SUBJECT 2 — DOCKET 2026-2 — APPROVED AS DOCKETED

It is proposed to amend Item 420, Classification of Articles—General to read as follows:

Item 420

CLASSIFICATION OF ARTICLES—GENERAL

Secs. 1-4. No Change.

Sec 5. In determining the applicable classification provision, a specific description takes precedence over a more general description provided the article or material being classified is embraced within the terms of the specific description, including any generic heading, subheading(s) and Note reference(s). ⇒See Note 1.

⇒**Note 1**—In determining the applicable item number for a commodity that is regulated by the U.S. Department of Transportation as hazardous and is required to bear a Hazard Class or Hazard Division label or placard, an item bearing the bomburst symbol (☼) takes precedence over an item that does not bear the symbol. In deciding between multiple items providing the bomburst symbol, the most specific description will take precedence. The determination of the applicable class remains subject to Item 680, Sec. 1 (a), Note 2(a) and (b).

Comment: Note 1 is added to Item (Rule) 420, Sec. 5 clarifying that provisions bearing the bomburst symbol (☼) take precedence over provisions without the symbol when classifying a commodity that is regulated as hazardous.

SUBJECT 3 — DOCKET 2026-2 — APPROVED AS DOCKETED

It is proposed to amend Item 540, Hazardous Materials, to read as follows:

ITEM 540

HAZARDOUS MATERIALS

Secs. 1-3. No Change.

Sec. 4. Empty Shipping Packages Containing Hazardous Material Residue: Empty shipping packages containing the residue of hazardous material regulated by the U.S. Department of Transportation will be classified as the package itself ⇨when: 1) either the material name, identification number, hazard warning label(s) or placard(s), and any other markings indicating that the material is hazardous have been removed, obliterated or securely covered, or the shipment meets the requirements of 49 CFR § 172.303 for markings and 49 CFR § 172.401(d) for labels; and 2) they are excepted from the hazardous materials regulations, per 49 CFR §173.29. Otherwise, the package will be classified as the hazardous material contained therein.

While compliance with U.S. Department of Transportation hazardous materials regulations must be made, determination of the applicable class ⇨for packages containing hazardous material residue is subject to Item 680, Sec. 1(a), Note 2(a) and (b).

Sec. 5. No Change.

Notes A-E—No Change.

Comment: Item (Rule) 540, Sec. 4 is amended to remove the term "only" in the first paragraph and add phrasing in the second paragraph to clarify the application of Item (Rule) 680, Sec. 1(a), Note 2(a) and (b).

Item 172 (concluded)

Where the provisions of other tariffs apply, and those provisions specify a limitation of the carrier's liability absent a release or value declaration by the shipper, the carrier's liability shall be limited to the extent provided by such applicable provisions when the shipper does not make the requisite or specified release or value declaration.

Comment: All items subject to the China Group are canceled with reference to item 47500, which provides the FCDC's 13-subprovision density scale. New Note, item 47502 is established attendant to the new item to provide additional packaging requirements. Additionally, the China Group generic heading and Note, item 47501, are canceled with no further application. Concurrently, the indentation of item 47500 is amended accordingly. Furthermore, Item (Rule) 172 is amended to remove reference to item 47500.

Item 172

LIMITATION OF CARRIER LIABILITY WHERE VALUE IS NOT DECLARED BY SHIPPER

Where item 47500, ~~88160~~, 100240, 164900 or 168960 of this Classification applies, and shipper fails to declare a value as required by those provisions, the shipment will not be accepted, but if the shipment is inadvertently accepted, the carrier's liability shall be limited as follows:

ITEM NO.	DESCRIPTION	VALUE LIMITATION
47500	Ceramicware, China, Earthenware, Porcelain or Stoneware , NOI	\$1.70 per pound
88160	Glassware , NOI	\$19.00 per pound

164900	Radioactive Materials	\$25.00 per pound
168960	Records, Documents or Files , office	\$0.25 per pound

Where the provisions of other tariffs apply, and those provisions specify a limitation of the carrier's liability absent a release or value declaration by the shipper, the carrier's liability shall be limited to the extent provided by such applicable provisions when the shipper does not make the requisite or specified release or value declaration.

Comment: Various items subject to the Glassware Group are canceled with reference to item 88160, which is amended to name "Glassware," with a "viz." format, and provides the FCDC's 13-subprovision density scale. Items 87570 and 87760 are canceled with reference to item 56290, and item 88080 is canceled with reference to item 57810; both items provide the FCDC's 13-subprovision density scale. Item 87650 is canceled as obsolete.

Concurrently, the Glassware Group, and fourteen notes within the group, are canceled with no further application. New Note, item 88162 is established attendant to item 88160 to provide additional packaging requirements, and Note, item 78713 is canceled and reestablished attendant to item 88160 as Note, item 88163. The indentation of item 88160 is also amended accordingly.

Furthermore, Package 213 is canceled with no further application and Item (Rule) 172 is amended to remove reference to item 88160.

SUBJECT 6 — DOCKET 2026-2 — APPROVED AS DOCKETED — Concluded

Comment: Various items subject to the Building Woodwork Group are canceled with reference to new item 37620, naming "Building Woodwork," which provides a "viz." format, and the FCDC's 13-subprovision density scale. Items 37990, 38200, and 38210 are canceled with reference to items 35255, 37620 and 33610, respectively.

Additionally, Notes, items 37502, 37504, 37506 and 37592 are canceled with no further application. Note, item 37592 is canceled with reference to new Note, item 37624, Note, item 37662 is canceled with reference to new Note, item 37622, and Note, item 38211 is canceled with reference to new Note, item 37623. Note, item 37621 is established attendant to the new item to provide additional packaging requirements.

Comment: Various items subject to the Insulators generic heading are canceled with reference to new item 103650, naming "Insulators," which provides a "viz." format, and classes predicated on the FCDC's standard 13-subprovision density scale. Notes, items 103662 and 103663 are canceled and reestablished as Notes, items 103651 and 103652, to clarify the application of the new item. Additionally, the generic heading, item 103600, is amended to read "Insulators Group."

Concurrently, item 103660 is canceled with reference to both the new "Insulators" item and an additional new item, 103640, that names "Electric Wire or Wiring, glass, in liquid in inner containers," and provides class 500. The "👉" symbol is added to the latter new item as well. Note, item 103746 is canceled with no further application.

SUBJECT 30 — DOCKET 2026-2 — APPROVED AS MODIFIED

It is proposed to amend Item 245, Definition of or Specifications for Crates, to read as follows:

Crates are six-sided containers constructed of wood or metal slats or structural members with apertures between, securely nailed, bolted, screwed, riveted or welded together, of sufficient design and strength to fully enclose and protect contents so as to withstand the normal rigors of the less-than-truckload environment. Article(s) must be secured within crates and no part shall protrude. ⇨Surfaces liable to be damaged must be fully covered and protected. All moveable contents within the crate must be blocked and/or braced to prevent any shifting during transportation. ⇨Commodities with legs must be suspended away from all edges of the crate by at least one inch. Crates must be framed to provide sufficient strength and stability to support toploaded freight of even load and weight distribution during transport, utilizing the available space above the crate, up to 96 inches, and having a density of at least 20 pounds per cubic foot. ⇨If the weight of the commodity exceeds 500 pounds, a standard crate must be used instead of a wirebound crate.

Standard wood crates must meet the following minimum specifications:

Base: Crates must have a lift truck skid, pallet or platform of sufficient design, size and strength to ensure article(s) cannot cause any failure of structural components. Deck boards must be sufficiently close to one another, or a wood structural panel (see Note 1) may be secured on top of deck boards to adequately protect article(s) from underside damage and to prevent article(s) from falling through the deck.

Note 1—Wood structural panels (plywood or oriented strand board) shall conform to DOC PS1, DOC PS2, ANSI/APA PRP 210, CSA O325 or CSA O437*.

Sides, Ends and Tops: Crates must be constructed with an outer framework consisting of upright and horizontal members and with additional diagonal, upright and horizontal members where necessary to provide proper strength and rigidity.

⇨Crate sides, ends and tops must be constructed with slats or members sufficiently close to one another to adequately protect article(s) on the sides, ends, top and bottoms, but openings on the sides, ends and tops must not exceed 24 inches in their greatest dimension, which may be the length, width, height or diagonal measurement of the opening. See Note 2.

Where present, wood structural panel(s) must be secured to frame with fasteners appropriate to prevent failure during transport.

SUBJECT 30 — DOCKET 2026-2 — APPROVED AS MODIFIED — Continued

Item 245 (concluded)

Note 2—Lumber must be seasoned, reasonably sound, and free from cross grain and knots which would interfere with nails, bolts or screws, or knots which are greater than 1/3 the width of the lumber.

Fasteners: Framework, corners and joints must be secured with nails, bolts or screws to ensure the fastened connections are stronger than the materials being joined.

Interior Requirements: Article(s) must be secured to prevent movement during transport. Protective packing forms or other packaging materials must be used where necessary to afford adequate protection against damage to the article(s). Article(s) with legs must be suspended away from all edges of the crate by at least one inch.

Three-Way Locking Corners: Crates must be constructed with three-way locking corners, where members will be joined with nails, bolts or screws driven into side grain of joining members. Examples are shown below:

Metal crates must meet the following minimum specifications:

Base: Crates must have a metal lift truck skid, pallet or platform of sufficient design, size and strength to ensure article(s) cannot cause any failure of structural components. Deck slats must be sufficiently close to one another to prevent article(s) from falling through the deck. Article(s) must be adequately secured to a metal lift truck skid, pallet or platform that will adequately protect contents from underside damage.

Sides, Ends and Tops: Crates must be constructed with an outer framework consisting of upright and horizontal members and with additional diagonal, upright and horizontal members where necessary to provide proper strength and rigidity.

⇒Crate sides, ends and tops must be constructed with slats or members sufficiently close to one another to adequately protect article(s) on the sides, ends, tops and bottoms, but openings on sides, ends and tops must not exceed 24 inches in their greatest dimension, which may be the length, width, height or diagonal measurement of the opening.

Interior Requirements: Article(s) must be secured to prevent movement during transport. Protective packaging forms or other packaging materials must be used where necessary to afford adequate protection against damage to the article(s). Article(s) with legs must be suspended away from all edges of the crate by at least one inch.

[REMAINDER OF ITEM—NO CHANGE.]

SUBJECT 30 — DOCKET 2026-2 — APPROVED AS MODIFIED — Concluded

Comment: Item (Rule) 245 is amended to provide additional interior packaging requirements for all authorized crates. A weight restriction of 500 pounds is also assigned to wirebound crates. As modified, requirements for sides, ends, and tops for standard wood crates and metal crates are amended to ensure openings do not exceed 24 inches in their greatest dimension and the reference to horizontal members is removed.

SUBJECT 31 — DOCKET 2026-2 — APPROVED AS DOCKETED**ITEM 680****PACKING OR PACKAGING—GENERAL**

Secs. 1. (a) No Change.

Notes 1 and 2—No Change.

⇒ **Note 3**—Unless otherwise provided, articles tendered on reels shall be deemed to be in compliance when the reel is filled to not less than 65 percent capacity. The occupancy of the reel shall be determined using the following measurements and formula. If the result of the calculation is equal to or less than 0.35, the reel and its contents shall be deemed to be in compliance. If the result of the calculation is greater than 0.35, the gross weight of the reel and the commodity wrapped or wound thereon will be subject to the class applicable to either the reel or the commodity, whichever is higher.

$$\text{Reel Capacity} = \frac{\text{Distance from Innermost Exposed Wrap of Commodity to Outermost Edge of the Reel's Flange (in or cm)}}{\text{Diameter of the Reel's Flange (in or cm)}}$$

Note 4—No Change.

Secs. 1. (b)-17. No Change.

Comment: Item (Rule) 680, Note 3 is amended to provide an equation to determine compliancy of commodities wrapped or wound on reels.
