| Sub 13 | 50 or greater .....   | 50    |
| 161856 | NOTE—No Change.   |       |
| 161857 | NOTE—No Change.   |       |
| ⇒NEW   | NOTE—Printed matter tendered for shipment on lift truck skids, pallets or platforms must not overhang the skid, pallet or platform deck, and all exposed surfaces and edges must be protected by packing forms or other packaging materials so as to withstand the normal rigors of the less-than-truckload environment. Printed matter in rolls must be secured to the lift truck skid, pallet or platform by strapping or other packaging methods to prevent shifting of the load. Printed matter sheets stacked on lift truck skids, pallets or platforms must be secured to the lift truck skid, pallet or platform by strapping in opposing directions, with at least two straps in each direction. All corners and strapping contact points must be protected by packing forms. |       |

**SUBJECT 4**

Analysis

**Introduction**

All items in the Advertising Group name particular types of public mediums used to promote products, services, places, or events to raise awareness and/or increase sales, and these provisions can be difficult to define, interpret, apply, or verify. The transportation characteristics below relate to items subject to the Advertising Group, as shown in the Present Classification Provisions herein.

**Transportation Characteristics**

**Density**—The information of record includes 15,858 density observations obtained from the FCDC’s Density Study<sup>1</sup>. The densities range from 1.42 to 59.94 pcf, with an average density of 15.37 pcf. As shown in the graph below, the densities are distributed throughout the range, with distinct peaks in the 8 but less than 10 pcf and 15 but less than 22.5 pcf intervals.

**Handling, Stowability, and Liability**—There have been no reports of unusual or significant handling, stowability, or liability issues.

<sup>1</sup> The Density Study is part of an ongoing effort by the FCDC to collect information on actual shipments across all product categories handled by the LTL industry. Carriers that choose to participate in the Study periodically submit shipment data captured through their respective freight auditing programs. The FCDC uses verifiable data points, identified by NMFC item, that include the weight and the dimensions and/or cube of the shipping unit.

## SUBJECT 4

### Conclusion

Based on the foregoing analysis, this proposal would cancel all items subject to the Advertising Group with reference to at least one of or a combination of the full-scale, density-based provisions of items 20580<sup>2</sup>, 49260<sup>11</sup>, 49880<sup>11</sup>, 70970<sup>11</sup>, 98390<sup>11</sup>, and 161855<sup>11</sup>. Some of the involved items would be canceled with reference to other items within this Classification, dependent upon the commodities' overall representation and intended use. These actions would not only promote clarification and simplification but also alleviate interpretive issues.

Concurrently, the "viz." listings in items 49880, 98390, and 161855 would be amended.

Additionally, seven Notes would be canceled with no further application, as would the Advertising Group generic heading, item 4640.

The minimum packaging requirements would ensure that freight is adequately protected and can be handled and stowed in a manner that is reasonably safe and practicable so as to withstand the normal rigors of the less-than-truckload environment. Furthermore, a new Note attendant to item 161855 would be established to provide additional packaging requirements.

---

<sup>2</sup> Items 20580, 49260, 49880, 70970, 98390, and 161855 provide the FCDC's standard 13-subprovision density scale, which includes reference to Item (Rule) 170, the inadvertence clause.
